1. Introduction:

In today's fast-paced digital world, people often look for the best deals and discounts available in their nearby areas. However, most existing online marketplaces focus on large-scale businesses, neglecting local vendors and small shops. To bridge this gap, *Local Deal Finder* aims to create a user-friendly web platform where users can find **deals, offers, and discounts from local vendors** within their city or neighborhood.

The system will empower local vendors to **promote their products** and **increase sales**, while users benefit from discovering **affordable and nearby deals** without wasting time searching manually.

---

2. Problem Statement:

Many people miss out on great deals from local stores because there is **no centralized online platform** that connects customers with local vendors. Small vendors also struggle to advertise their products digitally due to limited resources and lack of technical knowledge.

Therefore, there is a need for a **web-based solution** that enables vendors to post deals and allows users to easily find nearby offers using **location-based search and categorization**.

---

3. Objectives:

- To design and develop a **web-based platform** for finding local deals and discounts.
- To enable **local vendors** to create accounts and post deals with images, prices, and descriptions.
- To allow **users** to search for deals **based on category, price, and location proximity**.
- To integrate **map-based visualization** of deals using Google Maps or OpenStreetMap API.
- To provide a **rating and feedback system** for vendors and deals.
- To create an **admin panel** for managing users, vendors, and deals.

---

4. Scope of the Project:

The system will include:

- **User Module:**
  - Registration/Login
  - Search and filter deals by location or category
  - View deal details, images, and vendor info
  - Add deals to favorites
  - Give feedback/reviews
- **Vendor Module:**
  - Registration/Login
  - Post new deals with descriptions, prices, and images
  - Edit or delete posted deals
  - View analytics on number of deal views
- **Admin Module:**
  - Manage users and vendors
  - Approve or reject deals
  - Remove inappropriate content
  - Monitor website statistics

---

5. Tools and Technologies

Frontend	HTML, CSS, JavaScript, Bootstrap, React.js
Backend	PHP / Node.js / Python (Django or Flask)
Database	MySQL or Firebase
Mapping Service	Google Maps API / OpenStreetMap
Hosting	Firebase Hosting / XAMPP / Localhost
Version Control	GitHub

6. Expected Outcomes:

- A fully functional **Local Deal Finder Website**.
- An **interactive and mobile-friendly UI** for users and vendors.
- Location-based deal searching system with category filters.
- Improved **visibility for small businesses**.
- Enhanced **community engagement** by promoting local commerce.

---

7. Project Significance:

This project promotes **local business digitization**, encourages **smart shopping**, and supports **community-based commerce**. It is practical, scalable, and can be expanded into a **mobile app** in the future.

---

8. Conclusion:

The *Local Deal Finder* will serve as an innovative digital platform that connects customers and local vendors efficiently. It not only provides convenience to users but also empowers small businesses to compete in the digital marketplace, making it socially beneficial and technically challenging project for Computer Science students.
